ANKIT KUMAR CHOUDHARY

Software Developer II (SDE-2) | Distributed Systems & Microservices | LLM Coding-Agent Evaluation

+91-7067423108 | ankitchoudhary.sde@gmail.com | LinkedIn | Portfolio | Bengaluru, Karnataka

SUMMARY

SDE-2 and **Codeforces Expert (1800+)** building **scalable distributed systems** and low-latency microservices (Java/Spring Boot, Python/Django); saved **₹1.3 Cr per quarter** with an anomaly-detection system and ran services at **120 TPS, 70 ms P99**. Now builds Docker evaluation environments, hidden tests and rubrics for **frontier LLM coding agents**.

EXPERIENCE

AI Engineer — LLM Coding-Agent Evaluation & Task Author | Freelance | Remote **10/2026 - Present**

- **Containerised AI Sandboxes:** Built reproducible **Docker environments** (pinned commits, PostgreSQL, Redis) on real open-source Python and Java codebases up to **355k lines**; builds under 15 minutes.
- **Deterministic Verification:** Authored **~30 task versions over 7 rounds** (~70 agent trials) with hidden fail-to-pass and regression tests (pytest); each verified first: starting code fails, reference passes, wrong fixes fail.
- **Distributed-Systems Tasks:** Merged a real **33-commit Redis Cluster PR** into newer master, graded on a 3-node Docker cluster; built lock-ownership, shutdown-race and monotonic-clock migration tasks.
- **Grader Hardening & Debugging:** Fixed OpenBLAS oversubscription in emulated containers (**7.5 s to 0.45 s**); hardened graders so a skip-every-test hack that passed the old grader now fails.
- **Trajectory Analysis & Review:** Graded agents with 8-dimension rubrics and fabrication checks; reviewed a peer's submission, correcting **7 of 12 rubrics**; wrote a 35-line source-verified checklist.

Software Developer II (SDE-2) | **Spinny** | Gurugram, Haryana **12/2024 - 05/2025**

Distributed Lead Leakage & Anomaly Detection | Tech: Python, Django, MongoDB, Redis, Firebase

- **Real-Time Event Ingestion:** Designed a **distributed anomaly-detection pipeline** over call and activity logs from **2,500+ field inspectors**, with Redis caching for state deduplication and Firebase for instant fraud alerts.
- **Business Impact:** Flagged 300+ anomalous activities monthly, **cutting leakage by 22%** and saving **₹1.3 Cr quarterly**.

Automated Inspection Cost Prediction | Tech: Python, Django, Pandas, Redis, Camunda BPM

- **Workflow Automation:** Built a part and labor cost engine for **5,000+ daily inspections** via a Camunda issue-probability matrix, **cutting manual effort by 85%**.

Software Developer | **Goldman Sachs** | Bengaluru, Karnataka **06/2022 - 08/2024**

High-Throughput Prospect Capture | Tech: Java, Spring Boot, MongoDB (Change Streams), Kafka, Redis

- **Event Architecture:** Designed a prospect-capture microservice on **MongoDB Change Streams (CDC)** and **Kafka**, **raising customer engagement by 23%**.
- **Resilience & Performance:** Tuned connection pooling, indexing and @Async, with AES-256 PII encryption and Resilience4j, to sustain **120 TPS at 70 ms P99**.

Distributed Statement Generation | Tech: Java, Spring Boot, Hazelcast, iText, PhantomJS

- **Distributed Caching:** Scaled a rendering microservice across **10 nodes** with **Hazelcast**, reaching **280 PDFs per second**, +30% efficiency.

Enterprise Bundle Management System | Tech: Java, Spring Boot, AWS S3

- **Zero-Downtime Distribution:** Internal APK platform: **50+ releases/month**, **zero downtime**, **200 ms** version checks.

EDUCATION

B.Tech - Computer Science and Engineering | CGPA 7.51/10 **2018 - 2022**
National Institute of Technology, Patna | Patna, Bihar

KEY ACHIEVEMENTS

- **Codeforces Expert** (rating 1800+).
- Saved **₹1.3 Cr quarterly** by engineering an anomaly-detection system that reduced lead leakage by **22%**.

SKILLS

Languages & Core CS: Java, Python, C++, SQL, Data Structures and Algorithms, System Design, OOP, Concurrency
Backend & Architecture: Spring Boot, Django, Flask, Microservices, REST APIs, Event-Driven Architecture
Data & Infrastructure: MongoDB, PostgreSQL, Redis, Kafka, Hazelcast, Firebase, AWS S3, Docker, Git
AI & Evaluation: LLM agent evaluation, prompt design, rubric design, trajectory analysis, Harbor, OpenCode, mini-swe-agent
